PORTABLE
OPERATION MICROSCOPE L-0940SD
Quality Optics

MADE IN JAPAN
www.inami.co.jp/english
L-0940SD is a portable operation microscope with user-friendly functions, a wide range of expandability, and high quality optics that provide operators with a fine and crisp view. The set comes in a secure lockable carrying case for an ease of transportation.

FEATUES

Professional portability

The set of L-0940SD can be securely contained in a lockable carrying case which is a standard accessory. It is useful for any occasion of taking the equipment such as eye camp.

Side changer

Side changer, which is located above of the microscope head, is a function that enables operators to easily change the target eye from side to side without moving the whole arm part of microscope.

Scalability to stand type

Simply by attaching L-0940SD to an optional set of pole and base K-1422, operators can use the microscope as a stand type. K-1422 is designed to save space while the microscope keeps necessary strength and stability.

C-mount camera

Built-in c-mount and camera (digital or analogue) can be equipped as an option when the whole microscope is purchased. Please refer to the chart to find a preferred combination and use the code for order. This option upgrades the microscope to a telemedical application.
