**INAMI Applanation Tonometer L-5110/L-5130**

**Swing arm Type**

L-5110 INAMI Applanation Tonometer for the measurement of intraocular pressure is designed to be mounted on the microscope permanently. When the tonometer is in use it can be swung forward just in front of the microscope and exact centering of the prism with the left eyepiece is engaged by notch. Illumination through the built-in cobalt filter projected to the plastic measuring prism for flattening the vertex of cornea gives reflection-free observation of split images.

**Plate Type**

L-5130 INAMI Applanation tonometer can also be used with various INAMI Slit Lamps. L-5130 can be placed on the guide plate in one of two possible positions. These positions are connected with the microscope, for observation can be made either through the right or the left eyepiece.

**Specifications:**

- **Measuring range:** From 0 to 80mmHg in 2mmHg increments ±0.5mmHg
- **Diameter of the pneumatic face:** 3.06mm
- **Measurement:** 47mm wide x 30mm deep x 85mm high
- **Weight:** 725gs.

**Standard Set**

- Applanation tonometer × 1
- Prism × 2
- Calibration bar × 1
- Adaptor × 1

L-5110/L-5130 contains 2 cone prisms.
